

5 METHOD AND SYSTEM FOR COUPLING A SELECTIVE CALL
RECEIVER TO WIDELY DISTRIBUTED INFORMATION SOURCES

Abstract of the Disclosure

10 A communication system (10) for coupling a selective call
transceiver (18) to a widely distributed information source (24) comprises a
server (22) coupled to the widely distributed information source. The
server contains agents for retrieving information customized for a given
selective call transceiver. The system further includes a paging terminal
15 (20) coupled to the server for allowing the selective call transceiver to
request information from the server. The system also includes a
transmitter for transmitting the predetermined information retrieved
from the widely distributed information source to the selective call
transceiver.
